## DETAILED ACTION

### *Allowable Subject Matter*

Applicant has canceled claims 1-17 and added new claims 18-26.

As per claims 18-20, and 25-26 the closest prior art of record Coutts et al., U.S. Patent 6,311,165 taken either individually or in combination with other prior art of record fails to teach or suggest the use of a portable device that is used in conjunction with a self-service terminal to receive a first executable software program that generates a second executable software program to be executed in the self-service terminal

The specific allowable feature, which distinguishes the present invention over the prior art is the use of a portable terminal that can interface with a self-service terminal. The unique and non-obvious aspect of the invention is the use of a portable terminal/device that receives a first executable software that generates a second executable software in the self-service terminal. The prior art has self service terminals i.e. ATM machines that require participants ID, smart cards, credit cards, etc., with the executable software resident in the ATM. This invention provides a portable terminal that provides the security, identification and power to interface with self-service kiosk/terminals and conduct transactions with different establishments not dedicated to the self-service terminal.

Claims 21 - 24 are dependent upon Claim 20 and thus have all the limitations of claim 20 and are allowable for that reason.
